Primary Examiner, Art Unit 2895

Continuation of 11, does NOT place the application in condition for allowance because: applicant contends that moving dependent claim 3 are into independent claim 13 more allowable form, contending that the limitation of dependent claim 3 are not taught by the prior art of record. Applicant also contends that the art does not teach the shortest current path lies closer to the gate electrode than to all paths of the shortest physical distance between the source and the drain. Examiner assumes the applicant is referring to Fig. 6 of Gu et al. Im Fig. 6, Gu clearly discloses the shortest current path which occurs along the "finit-french" formed in the semiconductor layer 23. Because the perimeter of the "mini-trench" is larger than the shortest physical distance between point on source and drain 29 and 31, Gu et al still anticipates that limitation. Applicant also contends that the mini-trench formed is an unavoidable result of the etching process. Examiner respectfully submits that whether or not it is a unavoidable result is irrelevant to the argument. The fact of the matter is that the mini-trench is formed from such a process which ultimately results in a longer current path (i.e. peimeter of the trench).
